## Chapter 1: Introduction

## Overview

The *Address Information System (AIS) Products Technical Guide* contains documentation on all AIS products, including:

- Carrier Route Product
- City State Product
- Delivery Statistics Product
- eLOT Product
- Five-Digit ZIP Product
- RDI Product
- Z4CHANGE Product
- ZIP + 4 Product
- ZIPMove Product

**Note:** *All products consist of a master/base file containing all records in the ordered area(s).*

Mailers are responsible for the proper composition of mail to carrier routes according to the latest USPS scheme.

## Carrier Route Product

The Carrier Route product provides mailers who wish to take advantage of presort postage discounts the reference information needed to apply carrier route codes to addresses. Mail containing carrier route codes can then be presorted to the carrier route level.

## City State Product

The **City State** portion of the City State product is a comprehensive list of ZIP Codes and the city, county, and post office names associated with those ZIP Codes. It can be used to validate the city name and ZIP Code that is part of a mailing address, and as a link between other AIS product data.

This product contains records that can assist mailers with the following processing functions:

- ZIP Code validation
- ZIP Code assignment
- Finance number assignment
- County code/name identification
- Street name matching
- ZIP Code and carrier route changes

The **Street Alias** portion of the product contains all street aliases and primary street names and can be used in conjunction with a separate application to locate the new name for a street. For example, if a match is not found in the ZIP + 4 product, use the Street Alias and match on the ZIP Code and alias street names. If a match is found, the street name can be used and return to the ZIP + 4 product.

The **Zone Split** portion of the product is a list of ZIP Codes with carrier route identification codes that have been reorganized within the past eighteen months. If a ZIP Code cannot be found in the ZIP + 4 product, check Zone Split to see if a new ZIP Code has been assigned.

The **P.O. Box™ Only** portion of the product contains P.O. Box Only Delivery Zones. These records assist mailers in identifying communities where the customer's only acceptable form of postal delivery is through a P.O. Box address. This flag is different from the existing ZIP Classification code "P" located in the City State Detail record, which indicates where a ZIP Code only has P.O. Boxes but other forms of postal delivery are also provided to the community.

The **Seasonal** portion of the product identifies ZIP Codes and the months that the seasonal addresses are to be considered occupied. Use this information to decide whether or not to create mailing for seasonal addresses in a ZIP Code.

## **Delivery Statistics Product**

The Delivery Statistics product contains information regarding delivery by carrier route and post office box section. This data file will define the number of post office boxes and business/residential deliveries on city, rural, and contract routes for all ZIP Codes.

## **eLOT Product**

The eLOT product was developed to give mailers the ability to sort their mailings in approximate carrier-casing sequence. To aid in mail sortation, eLOT contains an eLOT sequence number field and an ascending/descending code. The eLOT sequence number indicates the first occurrence of delivery made to the Add-on range within the carrier route, and the ascending/descending code indicates the approximate delivery order within the sequence number. eLOT processing may be used by mailers to qualify for enhanced carrier route presort discounts.

USPS requires address lists to be processed through CASS Certified ZIP + 4 address-matching software before being processed against the eLOT product. Non ZIP + 4 coded records may not be used with this product.

## **Five-Digit ZIP Product**

The Five-Digit ZIP product, in conjunction with the City State product, provides 5-digit ZIP Code data that can be appended to computerized mailing lists via address-matching software. This product contains detailed street data for multi-coded cities (i.e., cities that have more than one 5-digit ZIP Code).

**Note:** *Although the Five-Digit ZIP product contains detailed street data, a complete list of ZIP Codes for single-and multi-coded cities can only be found in the City State product.*

Both the City State product and Five-Digit ZIP product are required to perform complete 5-digit ZIP encoding and validation.

## RDI Product

RDI is a data product that verifies whether a delivery type is classified as residential or business. Designed specifically for shipping parcels, this distinction between delivery types is valuable due to the fact that some shipping companies charge higher fees for residential delivery. By having the additional data provided by RDI, it is possible to determine shipping rate information with greater accuracy, analyze parcel shipping patterns and costs, and ultimately make informed decisions about the most cost-effective means of conducting shipments.

The RDI product must be used in conjunction with CASS Certified ZIP + 4 address matching software and may be used on any platform.

The format of the data is binary. The Software Developer's Guide should be used to develop software to query the data. To obtain a copy of this guide, please contact our Licensing Department at 800-589-5766 or [ncoalink@usps.gov](mailto:ncoalink@usps.gov).

## Z4CHANGE Product

The Z4CHANGE product provides mailers the information necessary to create an application that will facilitate frequent and cost-effective processing for updating very large computerized mailing lists for automation compatibility and improved deliverability.

Current USPS regulations require that all customer address lists be processed by CASS Certified address-matching software (see *Domestic Mail Manual* (DMM), section A708 for a complete description of CASS requirements). CASS-certified software applies the correct ZIP + 4, delivery point, and/or carrier route codes while standardizing the address, city, and state elements. To enhance deliverability, the USPS recommends that customers reprocess their address lists more frequently using CASS Certified software; however, frequent reprocessing of address lists can be costly and time-consuming.

Z4CHANGE was developed for customers who need data as a cost-effective means of improving the deliverability of their mail using the most current ZIP + 4 and delivery point information. Z4CHANGE helps customers achieve this goal by providing data that indicates which ZIP + 4 codes have been realigned in the past twelve months. When a high-rise ("H") or firm ("F") record is added to the ZIP + 4 product by the USPS, Z4CHANGE also shows a transaction for the supporting street ZIP + 4 code, allowing customers the opportunity to upgrade previously-coded street-level matches. Customers must then develop their own software to access Z4CHANGE to determine which records on their address lists need to be reprocessed by CASS Certified software. As a result, only the records that have had transactions will need to be reprocessed, which can be done monthly or bimonthly.

Should the USPS determine that a significant change in CASS requirements warrants a complete update of all addresses, Z4CHANGE customers may be notified that they will be required to reprocess their entire address lists. Otherwise, Z4CHANGE customers will only be required to reprocess their entire address lists at the end of the third year following Z4CHANGE certification.

The Z4CHANGE product and CASS certification offer the following benefits:

- Eliminates the need to reprocess an entire address list by providing a means of maintaining continuous qualification for discounted automation rates. Z4CHANGE users' address files remain current and in compliance with USPS® regulations.
- Increases address accuracy by enabling more frequent ZIP + 4 address file processing.
- Enhances the mailer's competitiveness in the marketplace by improving the deliverability of mail and increasing the promptness of mail delivery.

## ZIP + 4 Product

The ZIP + 4 product is the base reference that can be accessed by an application to assign the correct ZIP + 4 code associated with a mailing address. The complete ZIP + 4 product contains approximately 43 million records and is available either in its entirety or by selected state. Transaction files are also included and contain records that have been added-to or deleted-from the base file. The Action Code field in the transaction file indicates the type of action taken (A or D). A change is shown by a delete-add pair. The product is typically used to build an address-matching directory that is accessed by a separate matching application.

**Note:** *While the ZIP + 4 product contains detailed street data, a complete list of 5-digit ZIP Codes and city place names can only be found in the City State product. Both the City State product and ZIP + 4 product are required to perform complete ZIP + 4 encoding and validation.*

Matching a typical address file to the ZIP + 4 product requires sophisticated software. The majority of companies that wish to ZIP + 4 code their mailing lists either purchase commercially-available CASS Certified address-matching software or contract for CASS Certified address-matching services from a service bureau.

Use of CASS Certified address-matching software offers the following benefits:

1. **Reduced postage costs** — Adding ZIP + 4 codes and associated delivery point information in barcodes to mail piece address records can result in considerable postage discounts and can enable identification of costly duplicate addresses.
2. **Accurate address lists** — Matching address records with the appropriate ZIP + 4 codes will help identify incomplete or inaccurate addresses. Making corrections will reduce the amount of undeliverable-as-addressed (UAA) pieces, which in turn will result in more efficient mail processing and delivery.
3. **Improved demographic information** — ZIP + 4 codes can enhance the ability to identify a particular block, Post Office Box, building, apartment, or business location. Instead of sending mail to all customers in a 5-digit ZIP code or carrier route area, mailers can target a specific market area.
4. **Improved mailroom operations** — ZIP + 4 codes can be used to improve internal mail-sorting operations. High daily incoming mail volume *may* qualify an organization for two or more unique 4-digit Add-on codes. These Add-ons can be used to identify specific departments or functions within a company or, for example, to separate payments from other correspondence as incoming mail is sorted.
5. **Improved mail service and stabilized postage rates** — Use of ZIP + 4 coded addresses and the associated barcodes produced by CASS Certified software maximizes USPS® automated equipment sortation, which improves delivery, reduces mail processing costs, and fosters rate stability.

## ZIPMove Product

To reflect USPS® ZIP Code realignment efforts, the ZIPMove data file was created to assist address-matching software in providing up-to-date, accurate ZIP + 4 codes. This product is used to maximize mailers' ZIP + 4 code matching potential in situations in which ZIP Code realignments have taken place and a change in city name and/or finance number has occurred (which normally prevents address-matching software from determining the newly-assigned ZIP Code).

Mailers are encouraged to incorporate ZIPMove as a regular part of their address hygiene process as a means of correcting addresses that have undergone a ZIP Code realignment in which a change in city name and finance number occurred.

## **Software Development**

Only those organizations with very large files, special needs, or those planning to market an address-matching system should consider developing address-matching software as this can be an expensive investment. For instance, substantial preprocessing of user address files must be performed to format the software for matching to the ZIP + 4 product or Five-Digit ZIP product. Preprocessing includes parsing (i.e., separating) the mailing address into its basic elements and standardizing all abbreviations for suffixes, directionals, and other address components. Publication 28, *Postal Addressing Standards*, provides detailed information on address standardization and is available upon request.

## Chapter 2: File Layout

## Sort Sequence

All files are sorted in collating sequence in ascending order in the ZIP Code and Update Key Number data fields.

**ZIPMove Product (continued)**[illegible]

## Address Information System Products Technical Guide

## Chapter 4: Data Element Definitions

### Action Code

A field indicating the action to be taken in updating the base master files. For those master files, this field will always contain an “A” action code. For transaction files, this field will contain an “A” (add record to file) or “D” (delete base master record).

### Address Primary High Number

A house, rural route, contract box, or Post Office Box number. The numeric or alphanumeric component of an address preceding the street name. The high-end address in a range of addresses. Often referred to as *house number*.

#### Examples:

Address Range		Address Primary High Number
100 – 198	Main Ave	198
101 – 199	Main Ave	199
A200 – A298	Main Ave	A298
124-45 – 124-88	Main Ave	124-88
101 – 120	PO Box	120
22A – 22B	RR 2	22B

### Address Primary Low Number

A house, rural route, contract box, or Post Office Box number. The numeric or alphanumeric component of an address preceding the street name. The low-end address in a range of addresses. Often referred to as *house number*.

#### Examples:

Address Range		Address Primary Low Number
100 – 198	Main Ave	100
101 – 199	Main Ave	101
A200 – A298	Main Ave	A200
124-45 – 124-88	Main Ave	124-45
101 – 120	PO Box	101
1A – 1G	RR 2	1A

### Address Primary Odd/Even Code

The code that identifies the side or sides of a street for which a given address range is applicable. For street, high-rise, firm, and multi-carrier records, *O* = odd side of a street (odd-numbered addresses in the range), *E* = even side of a street (even-numbered addresses in the range), and *B* = both sides of a street. For general delivery, Post Office Box, and rural route/highway contract records, this code will always be *B*.

#### Examples:

Address Range			
100 – 198	Main Ave	E	Even addresses in the range
101 – 199	Main Ave	O	Odd addresses in the range
100 – 199	Main Ave	B	Even and odd addresses in the range

**Address Secondary Abbreviation**

A descriptive code used to identify the type of address secondary range information in the Address Secondary Range field. This code may be useful in address matching, e.g., the secondary address numbers may indicate apartment, suite, or trailer numbers. (See Publication 28, *Postal Addressing Standards* at <https://pe.usps.com/text/pub28/welcome.htm> for values.)

**Address Secondary High Number**

Code that describes an apartment, room, suite, space, floor, or other secondary addressing numeric or alphanumeric that follows a street address. The high-end secondary address component in a range of secondary addresses.

**Examples:**

Address Range	Address Secondary High Number
00000001 through 00000009	00000009
A through F	F
66A through 66E	66E

**Address Secondary Low Number**

Code that describes an apartment, room, suite, space, floor or other secondary addressing numeric or alphanumeric that follows a street address. The low-end secondary address component in a range of secondary addresses.

**Examples:**

Address Range	Address Secondary Low Number
00000001 through 00000009	00000001
A through F	A
55A through 55E	55A

**Address Secondary Odd/Even Code**

Code that identifies a secondary address within a range of secondary addresses as being odd (O), even (E), or both (B).

**Alias Date**

Code that contains the date an alias record was added or changed.

**Alias Delivery Address High Number**

The numeric or alphanumeric component of an address that precedes the alias street name; the high-end address in a range of addresses. If this field contains a value, it signifies that an alias address that falls in the range of the alias delivery address low number and alias delivery address high number should correspond to the street information. If this field is blank, it signifies that an alias address should correspond to the street information. (See [Address Primary High Number](#))

**Alias Delivery Address Low Number**

The numeric or alphanumeric component of an address that precedes the alias street name; the low-end address in a range of addresses. If this field contains a value, it signifies that an alias address that falls in the range of the alias delivery address low number and alias delivery address high number should correspond to the street information. If this field is blank, it signifies that an alias address should correspond to the street information.

(See [Address Primary Low Number](#))

**Alias Delivery Address Range**

A data name used to group the components of the alias delivery address low and high numbers.

**Alias Range Odd/Even Code**

Code that identifies the side or sides of an alias street for which an alias address range is applicable; B = Both sides of a street; E = The even side of a street (i.e., even-numbered addresses in the range); and O = The odd side of a street (i.e., odd-numbered addresses in the range).

**Alias Street Information**

A data name used to group the various components of a complete street name alias.

(See [Alias Street Name](#), [Alias Street Post-Directional Abbreviation](#), or [Alias Street Pre-Directional Abbreviation](#), or [Alias Street Suffix Abbreviation](#))

**Alias Street Name**

An alternative street name maintained at the 5-digit ZIP Code level; may be a name by which a street was formerly known or a commonly-used nickname for a street. Street names that include directionals and/or suffixes as part of the name will be standardized on all AIS product files according to USPS® addressing standards.

**Alias Street Post-Directional Abbreviation**

A geographic direction that follows an alias street name.

(See [Street Post-Directional Abbreviation](#) for a list of possible values.)

**Alias Street Pre-Directional Abbreviation**

A geographic direction that precedes an alias street name.

(See [Street Pre-Directional Abbreviation](#) for a list of possible values.)

**Alias Street Suffix Abbreviation**

USPS standard abbreviation for the trailing designator in an alias street address.

(See [Street Suffix Abbreviation](#) for a list of possible values.)

**Alias Type Code**

Code used to categorize alias records: A = Abbreviated street name, C = Street name change, O = Nickname/other, and P = Preferred street name.

**Ascending/Descending Code**

The order in which delivery points are delivered within an Add-on code. For example, in ZIP + 4 code 123456789, if the code is “A” and the house numbers are “1,” “3,” and “5,” the carrier delivers “1,” “3,” and “5,” in that order (low to high). If the ascending/descending code is “D,” then the carrier delivers in “5,” “3,” and “1” order (high to low).

**Base Alternate Code**

Code that specifies whether a record is a base (preferred) or alternate record. Base records (represented as “B”) can represent a range of addresses or an individual address, such as a firm record, while alternate records (represented as “A”) are individual delivery points. Base records are generally preferred over alternate records. However, one exception is ZIP + 4 product; in this file, government deliveries will only be listed on alternate records with the appropriate government building indicator (federal, state, or city) set.

**Building or Firm Name**

The name of a company, building, apartment complex, shopping center, or other distinguishing secondary address information. This field is normally used with firm and high-rise records but may also contain literals such as “Postmaster” or “United States Postal Service.”

**Business/Residential Mixed Count**

The number of deliveries which are primarily business but may also receive personal mail.

**Caller Service Box Count**

The number of PO Boxes established to allow customers to call for their mail more than once daily.

**Carrier Route ID**

A 4-byte code assigned to a mail delivery or collection route within a 5-digit ZIP Code. The first character of this identification is alphabetical, and the last three are numeric:

B### = PO Box

H### = Contract

R### = Rural route

C### = City delivery

G### = General delivery

**Carrier Route Rate Sortation and Merged 5-Digit Indicator**

Identifies where automation Carrier Route rates are available and where the commingling of automation and non-automation mail, including Enhanced Carrier Routes and 5-digit presort, on the same pallet or in the same container is allowed. The values are A, B, C or D and represent the following conditions:

- A = Carrier Route rates are available (Y) and merging is permitted (Y).
- B = Carrier Route rates are available (Y) and merging is not permitted (N).
- C = Carrier Route rates are not available (N) and merging is permitted (Y).
- D = Carrier Route rates are not available (N) and merging is not permitted (N).

**CBU Count**

The number of mail deliveries made to cluster boxes, also known as neighborhood delivery and collection box units (CBU). A CBU is a USPS-installed, freestanding unit that contains mail compartments in groups of 8, 12, 16, or 18.

**Centralized Count**

For a carrier route, the number of deliveries made to a delivery center or mailroom, i.e., any mail-receiving unit in which the carrier has access to more than one individual customer's receptacles by opening only one door or a single Arrow lock.

For rural delivery, the number of residential rural mail-receiving units in which the rural carrier has access to more than one individual customer's mail receptacle by opening one door.

**City Delivery Indicator**

Specifies whether or not a Post Office has city-delivery carrier routes:

- Y = Office has city delivery carrier routes
- N = Office does not have city-delivery carrier routes

**City Name**

A valid city name for mailing purposes; appears in the last line of an address on a mail piece.

**City State Key**

A value that uniquely identifies a city state name in the City State product.

**City State Mailing Name Indicator**

Specifies whether or not the city state name can be used as a last line of address on a mail piece:

- Y = City/state name is a USPS-approved mailing name.
- N = City/state name is not approved for mailing purposes.

**City State Name**

May be the name of a city, USPS® entity (such as a Post Office or station), community, USPS-preferred last line, municipality, or urbanization (Puerto Rico only).

**Note:** *An urbanization is an area, sector, or development within a city; it is an important part of the addressing format of Puerto Rico and aids in precisely matching an address.*

**City State Name Abbreviation**

A standard 13-character abbreviation for a city/state name. This field is only used for names that are greater than 13 characters in length and have a city/state mailing name indicator of “Y.” If the field is longer than 13 characters and the city/state mailing name indicator is “N,” the field will be blank.

**City State Name Facility Code**

The type of locale identified in the city/state name. The facility may be a USPS facility, such as a post office, station, or branch, or it may be a non-postal place name. City/state name facility codes include the following:

B = Branch

C = Community post office (CPO)

N = Non-postal community name, former USPS facility, or place name

P = Post Office

S = Station

U = Urbanization

**Congressional District Number**

A standard value identifying a geographic area within the United States served by a member of the U.S. House of Representatives. If Army/Air Force (APO), Fleet Post Office (FPO), or Diplomatic/Defense Post Office (DPO), this field will be blank. If there is only one member of Congress within a state, the code will be “AL” (at large).

**Contest Box Count**

The number of PO Boxes established for receiving payments through a centralized remittance operation.

**Contract Box Count**

For a carrier route, the number of mail deliveries made to Post Office Boxes located in contract stations.

**Copyright Detail Code**

Alphabetic code that identifies the type of record in a USPS® product file.

- A = Alias record
- C = Copyright record
- D = Detail record
- N = Seasonal record
- P = PO Box-only record
- Z = Zone split record

**Copyright Owner**

Field containing the letters that are part of the USPS copyright record and the acronym "USPS."

**Copyright Statement**

Field that is part of the USPS copyright record and contains the word "Copyright ©."

**County Name**

The name of the county or parish in which the 5-digit ZIP Code resides. If APO/FPO/DPO, then the county name will be blank. It is important to remember that many ZIP Codes serve more than one county.

**County Number**

The Federal Information Processing Standard (FIPS) code assigned to a given county or parish within a state. In Alaska, it identifies a region within the state. If APO/FPO/DPO, and the record type is "S," "H," or "F," the county number will be blank.

**Curb Count**

For a carrier route, the number of mail deliveries made to mail receptacles located at the curb.

**Delivery Address**

Address information found in the street-line address area on a mail piece; contains information required to deliver a mail piece correctly.

**Delivery Point Code**

In mail processing, the finest depth of code to which a mail piece can be sorted by its address. It is usually the 11-digit numeric code formed from the ZIP + 4 code and represented by the delivery point barcode (DPBC).

**Destination Delivery Unit (DDU) Key**

The key to the Drop Ship Address file for the location to drop off mail and receive a destination delivery unit discount.

**Destination Sectional Center Facility (DSCF) Key**

The key to the Drop Ship Address file for the location to drop off mail and receive a destination sectional center facility discount.

**Detached Box Count**

For a carrier route, the number of mail deliveries made to Post Office Boxes located in detached box units, i.e., box sections that are not located in a Post Office building, but for which USPS collects box rent.

**Discount Type Code**

Alphabetic code that identifies the discount rate provided by the drop ship site:

A = Area Distribution Center (ADC). Mail is dropped at ADC to receive ADC discount rate.

D = Delivery unit. Mail is dropped at the delivery carrier Post Office to receive the delivery unit discount rate.

B = Bulk mail center (BMC). Mail is dropped at the BMC to receive the BMC discount rate.

S = Section center facility (SCF). Mail is dropped at a SCF to receive the SCF discount rate.

**Drop Business/Families Served Count**

For a carrier route, the number of businesses or families served at drop sites. A drop site is a single delivery point or receptacle that services multiple “families.” Examples of drop sites include a single door slot shared by two families, a box on a wall for duplexes, or a boarding house or fraternity at which mail is delivered to the door for subsequent distribution. Mail for drop sites is distributed internally by the site. Commercial mailbox companies are also classified as drop sites because the carrier delivers the mail to one point, and it is distributed to specific boxes by the company.

**Facility Box Count**

The number of mail deliveries made to Post Office Boxes that are located in USPS® facilities.

**File Build Day**

The day the file is built or recreated.

**File Build Month**

The month the file is built or recreated.

**File Build Year**

The year the file is built or recreated.

**File Version Month**

Field representing the month for the current edition of the file.

**File Version Year**

Field containing the last two digits of the year for the current edition of the file.

**Finance Number**

A code assigned to Postal Service™ facilities (primarily Post Offices) to collect cost and statistical data and compile revenue and expense data.

The finance number can be used to match to records in other USPS files. By sorting these files by finance number, sequence matches can be made to use other street-level address information. For example, to use ZIP + 4 product to obtain ZIP + 4 codes for street addresses, a 5-digit ZIP Code, last-line number, or finance number for the street address must be known. The finance number can be obtained from the City State product.

For a street address such as “123 MAIN ST, SAN FRANCISCO CA,” matching to the City State product will not provide a single 5-digit ZIP Code because San Francisco has more than one ZIP Code (i.e., it is a “multi-coded city”); However, the finance number for San Francisco can be obtained from the City State product. Then, by sorting the ZIP + 4 product into finance number and street-name sequence, a match can be found to provide both the correct 5-digit ZIP Code and ZIP + 4 code.

**Note:** *The Carrier Route product will match on both the correct 5-digit ZIP and the carrier ID.*

**Government Building Indicator**

An alphabetic value that identifies the type of government agency at the delivery point and/or whether a firm is the only delivery at an address. For this purpose, “address” is defined as the complete delivery line (e.g., complete street address and, if included as part of the firm record, the secondary abbreviation and/or address secondary number).

This field may be blank or may contain one of the following values:

- A = City government building—Alternates only
- B = Federal government building—Alternates only
- C = State government building—Alternates only
- D = Firm only—Base and alternates
- E = City government building and firm only—Alternates only
- F = Federal government building and firm only—Alternates only
- G = State government building and firm only—Alternates only

**High Delivery Point Code**

Also known as the Delivery Point Barcode (DPBC). See Low Delivery Point Code. The last two digits of the primary delivery address number (Post Office Box number, rural route box number, or contract route number). Delivery point codes for multi-delivery points are calculated using a secondary number algorithm.

**LACS Status Indicator**

The Locatable Address Conversion Service (LACS) indicator describes records that have been converted to the LACS system (a product/system in a different USPS® product line that allows mailers to identify and convert a rural route address to a city-style address). Rural route and some city addresses are being modified to city-style addresses so that emergency services (e.g., ambulances, police) can find these addresses more efficiently.

L = LACS address: The old (usually rural-route) address that has been converted for the LACS system.

Blank = Not applicable

**Low Delivery Point Code**

Also known as the Delivery Point Barcode (DPBC). See High Delivery Point Code. The last two digits of the primary delivery address number (Post Office Box number, rural route box number, or contract route number). Delivery point codes for multi-delivery points are calculated using a secondary number algorithm.

**Merged 5-Digit Indicator**

Identifies where the commingling of automation and non-automation mail, including Enhanced Carrier Routes and 5 digit presort, on the same pallet or in the same container is allowed. The values are A, B, C or D:

A = Merging permitted (Y)

B = Merging not permitted (N)

C = Merging permitted (Y)

D = Merging not permitted (N)

**Municipality City State Key**

This field will be blank until further notice.

**New +4 High Number**

See [+4 High Number](#).

**New +4 Low Number**

See [+4 Low Number](#).

**New Action Code**

See [Action Code](#).

**New Address Primary High Number**

See [Address Primary High Number](#).

**New Address Primary Low Number**

See [Address Primary Low Number](#).

**New Address Primary Odd/Even Code**

See [Address Primary Odd/Even Code](#).

**New Address Secondary Abbreviation**

See [Address Secondary Abbreviation](#).

**New Address Secondary High Number**

See [Address Secondary High Number](#).

**New Address Secondary Low Number**

See [Address Secondary Low Number](#).

**New Address Secondary Odd/Even Code**

See [Address Secondary Odd/Even Code](#).

**New Base Alternate Code**

See [Base Alternate Code](#).

**New Building or Firm Name**

See [Building or Firm Name](#).

**New Carrier Route ID**

See [Carrier Route ID](#).

**New Congressional District Number**

See [Congressional District Number](#).

**New County Number**

See [County Number](#).

**New Detail Code**

See [Copyright Detail Code](#).

**New Finance Number**

See [Finance Number](#).

**New Government Building Indicator**

See [Government Building Indicator](#).

**New LACS Status Indicator**

See [LACS Status Indicator](#).

**New Municipality City State Key**

See [Municipality City State Key](#).

**New Preferred Last Line City State Key**

See [Preferred Last Line City State Key](#).

**New Preferred Last Line City State Name**

See [Preferred Last Line City/State Name](#).

**New Record Type Code**

See [Record Type Code](#).

**New State Abbreviation**

See [State Abbreviation](#).

**New Street Name**

See [Street Name](#).

**New Street Post-Directional Abbreviation**

See [Street Post-Directional Abbreviation](#).

**New Street Pre-Directional Abbreviation**

See [Street Pre-Directional Abbreviation](#).

**New Street Suffix Abbreviation**

See [Street Suffix Abbreviation](#).

**New Update Key Number**

See [Update Key Number](#).

**New Urbanization City State Key**

See [Urbanization City State Key](#).

**New ZIP Carrier Route**

The ZIP Code and Carrier Route ID of the ZIP + 4 records after the zone split reorganization.  
(See [ZIP Code](#) and [Carrier Route ID](#))

**New ZIP Code**

See [ZIP Code](#).

**New ZIP Sector Number**

See [ZIP Sector Number](#).

**New ZIP Segment Number**

See [ZIP Segment Number](#).

**NPU Count**

The number of non-personnel units (NPU) on a delivery route.

**Old +4 High Number**

See [+4 High Number](#).

**Old +4 Low Number**

See [+4 Low Number](#).

**Old Action Code**

See [Action Code](#).

**Old Preferred Last Line City State Name**

See [Preferred Last Line City State Name](#).

**Old Record Type Code**

See [Record Type Code](#).

**Old State Abbreviation**

See [State Abbreviation](#).

**Old Street Name**

See [Street Name](#).

**Old Street Post-Directional Abbreviation**

See [Street Post-Directional Abbreviation](#).

**Old Street Pre-Directional Abbreviation**

See [Street Pre-Directional Abbreviation](#).

**Old Street Suffix Abbreviation**

See [Street Suffix Abbreviation](#).

**Old Update Key Number**

See [Update Key Number](#).

### **Old Urbanization City State Key**

See [Urbanization City State Key](#).

### **Old ZIP Carrier Route**

See [ZIP Code](#) and [Carrier Route ID](#).

### **Old ZIP Code**

See [ZIP Code](#).

### **Old ZIP Sector Number**

See [ZIP Sector Number](#).

### **Old ZIP Segment Number**

See [ZIP Segment Number](#).

### **Other Box Count**

The number of PO Boxes that cannot be categorized as facility, contract, detached, NPU, caller, contest, or remittance boxes.

### **Other Count**

The number of mail deliveries made by means other than curbside, Post Office Box, or CBU. Examples of this type of delivery include door-to-door (walking route) or door-slot delivery.

### **Preferred Last Line City State Key**

In the Carrier Route, Five-Digit ZIP Code, Delivery Statistics, and ZIP + 4 products, an index to the City State product record that provides the preferred last-line name for this address range.

In the City State product, the preferred last line city/state key contains the key value of a City State product record that has the default preferred or alternate preferred last-line key for a given ZIP Code.

### **Preferred Last Line City State Name**

Field that contains the default preferred or alternate preferred last-line name for a ZIP Code.

**Record Type Code**

An alphabetic value that identifies the type of data in the record. Record type codes include the following:

- G = General delivery (5-Digit ZIP, ZIP + 4, and Carrier Route products)
- H = High-rise (ZIP + 4 only)
- F = Firm (ZIP + 4 only)
- S = Street (5-Digit ZIP, ZIP + 4, and Carrier Route products)
- P = PO Box (5-Digit ZIP, ZIP + 4, and Carrier Route products)
- R = Rural route/contract (5-Digit ZIP, ZIP + 4, and Carrier Route products)
- M = Multi-carrier (Carrier Route product only)

**Remittance Box Count**

The number of PO Boxes established for receiving payments through a centralized remittance operation.

**Residential/Business Mixed Count**

The number of deliveries which are primarily residential but may also receive business mail.

**Scheme Active Statistics Section**

A data name used to group delivery statistics for active mail deliveries.

**Scheme Possible Statistics Section**

A data name used to group delivery statistics for possible mail deliveries.

**Seasonal Delivery Indicator**

Indicates whether or not a specified month has seasonal occupancy:

Y= Seasonal Delivery; months mail will be delivered to these ZIP Codes.

N= Not a Seasonal Delivery; months mail will not be delivered to these ZIP Codes.

**Sequence Number**

A sequential number that indicates the order in which Add-on codes are arranged within a given carrier route.

**State Abbreviation**

A 2-character abbreviation for the name of a state, U.S. territory, or armed forces ZIP Code designation. If APO/FPO/DPO, then the state abbreviation will be "AA," "AE," or "AP."

## Street Information

Field used to group the various components of a complete street name.(See [Street Name](#), [Street Post Directional Abbreviation](#), [Street Pre-Directional Abbreviation](#), or [Street Suffix Abbreviation](#))

## Street Name

The official name of a street as assigned by a local governing authority. The Street Name field contains only the street name and does not include directionals (EAST, WEST, etc.) or suffixes (ST, DR, BLVD, etc.). This element may also contain literals, such as PO BOX, GENERAL DELIVERY, USS, PSC, or UNIT. Numeric street names that have numeric components that are four characters (or less) in length at are justified such that the low-order digit of the number is positioned in the fourth position of the street name field. This shift is made so that the numeric street names appear in numeric sequence.

## Street Post-Directional Abbreviation

A geographic direction that follows the street name. For a complete list of directional, please refer to Publication 28, *Postal Addressing Standards* at <https://pe.usps.com/text/pub28/welcome.htm>.

### Example:

123 MAIN ST N		Street Post-Directional Abbreviation = N
Spaces	=	No post-direction

## Street Pre-Directional Abbreviation

A geographic direction that precedes the street name. For a complete list of directional, please refer to Publication 28, *Postal Addressing Standards* at <https://pe.usps.com/text/pub28/welcome.htm>.

### Example:

123 N MAIN ST		Street Pre-Directional Abbreviation = N
Spaces	=	No pre-direction

## Street Suffix Abbreviation

Code that is the standard USPS® abbreviation for the trailing designator in a street address. (See Publication 28, *Postal Addressing Standards* at <https://pe.usps.com/text/pub28/welcome.htm> for values.)

## Telephone Number

The telephone number at which a facility may be reached.

## Transaction Century

The century in which the ZIP Codes were split.

**Transaction Date**

The date of a particular zone split transaction.

(See [Transaction Century](#), [Transaction Year](#), [Transaction Month](#), or [Transaction Day](#))

**Transaction Day**

The day of the month in which the ZIP Codes were split.

**Transaction Month**

The month in which the ZIP Codes were split.

**Transaction Year**

The year in which the ZIP Codes were split.

**Unique ZIP Code**

A ZIP assigned to a company, agency, or entity with sufficient mail volume, based on average daily volume of letter-size pieces received, availability of ZIP Code numbers in the postal area, and USPS® cost benefits.

**Unique ZIP Name Indicator**

Field that specifies whether the City State Record contains the organization name for a unique ZIP Code. If this field equals "Y," the organization name will appear in the City State Name field.

**Update Key Number**

Field that contains a number that uniquely identifies a record; used to identify the base record to which an add or delete transaction is being directed. The Update Key Number field is used only when applying transactions to the base file; it is not used in address matching and remains fixed for the life of the record. The field is alphanumeric and consists of the database segment code (V1, V2, W1, W2, X1, X2, Y1, Y2, Z1, or Z2) and eight characters containing an alphanumeric value ranging from 00000001 to AAAAAAAA.

**Urbanization City State Key**

An index to the City State file that provides the urbanization name for this delivery range.

## ZIP Classification Code

A field that describes the type of ZIP area that a 5-digit ZIP Code serves, e.g., a single educational institution, post office boxes only, or a single address that has unusually high mail volume or many different addresses. ZIP Classification Codes include the following:

M	=	Military ZIP Code
P	=	ZIP Code having only Post Office Boxes
U	=	Unique ZIP Code (ZIP assigned to a single organization)
Blank	=	Standard ZIP with many addresses assigned to it

## ZIP Code

A 5-digit code that identifies a specific geographic delivery area. ZIP Codes can represent an area within a state, or a single building or company that has a very high mail volume.

**Example:**  
12345 → ZIP CODE = 12345

## ZIP + 4 Code

Nine-digit code that identifies a small geographic delivery area that is serviceable by a single carrier; appears in the last line of the address on a mail piece. (See [ZIP Code](#) and [+4 Code](#))

**Example:**  
123456789 → ZIP CODE = 12345 with +4 6789

## ZIP Sector Number

Number that forms the first two digits of the ZIP + 4<sup>®</sup>. A ZIP sector is a subdivision of a 5-digit ZIP Code area.

**Example:**  
12345-6789 → ZIP Sector Number = 67

## ZIP Segment Number

Number that forms the last two digits of the ZIP Add-on code. The ZIP segment is a subdivision of a ZIP sector, i.e., it represents areas such as one side of a city block between intersections; both sides of a street, including cul-de-sacs; a company or building; a floor or group of floors within a building; a cluster of mailboxes; sections of Post Office Boxes; or other similar delivery groups. ZIP segments are established so that they do not cross state or county lines.

**Example:**  
12345-6789 → ZIP Segment Number = 89

## +4 Code

In a +4 code, the 4-digit number that follows the 5-digit ZIP Code. The 4-digit ZIP Add-on further subdivides these areas. (See also [ZIP Code](#))

**+4 High Number**

The high-end ZIP Add-on in a range of codes; the Add-on of the last +4 code in a consecutive series of +4 codes assigned to the delivery address. Most delivery addresses are assigned a single +4 code; however, large companies may be given a range of +4 codes that can be used to route mail to specific departments. A range of +4 codes can also be assigned to a corresponding range of Post Office Boxes, and each box is mapped, one-to-one, with a +4 code in the range. A single Post Office Box can also be assigned a range of +4 codes. (See [+4 Code](#))

**Example:**

12345-0001 through 12345-0009 → +4 High Number = 0009

All +4 codes associated with non-delivery areas are composed of valid ZIP sector numbers and “ND” for the ZIP segment number. Non-deliverable areas are areas to which the USPS does not deliver mail, such as vacant lots and land that borders railroad tracks. Mailers should not match an address identified as a non-delivery area. (See [ZIP Sector Number](#) or [ZIP Segment Number](#))

**+4 Low Number**

The last four positions of a +4 code; the low-end +4 in a range of codes; the Add-on of the first +4 code in a consecutive series of +4 codes assigned to the delivery address. For example, most delivery addresses are assigned a single +4 code. However, large companies may be given a range of +4 codes that can be used to route mail to specific departments. A range of +4 codes can also be assigned to a corresponding range of Post Office Boxes, and each box is mapped, one-to-one, with a +4 code in the range. A single post office box can also be assigned a range of +4 codes.

**Example:**

12345-0001 through 12345-0009 → +4 Low Number = 0001

All +4 Codes associated with non-delivery areas are composed of valid ZIP sector numbers and “ND” for the ZIP segment number. Non-deliverable areas are areas to which the USPS does not deliver mail, such as vacant lots and land that borders railroad tracks. Mailers should not match an address identified as a non-delivery area. (See [ZIP Sector Number](#) or [ZIP Segment Number](#))

## Chapter 5: Record Types

## Street Records

A street record (record type “S”) consists of a range of addresses on a street block, block face (one side of a street), cove, cul-de-sac, or other address grouping. Generally, all named or numbered streets with mail delivery or potential for mail delivery have “S” records in the ZIP + 4 product.

As the following example illustrates, numeric street names that are four characters or less must be positioned so that the last number is in the fourth column of the Street Name field:

Non-numeric street name    **MAIN**  
 Numeric street name         **3RD**  
 Numeric street name         **20TH**

An “S” record may also be used to identify the primary ZIP Add-on for a firm with a unique 5-digit ZIP Code. Portions of a street that borders parks, railroad tracks, or other areas where there is no potential for mail delivery may have an “S” record representation in the ZIP + 4 product, but they will not have a complete ZIP + 4 code. The ZIP segment portion of the ZIP + 4 Add-on will contain the value “ND.” Table 6.1 below depicts how a series of “S” records might appear in the ZIP + 4 product based on the mapping of sectors over a 5-digit ZIP area and the assignment of segments within those sectors.

**Table 6.1** “S” Record Layout in the ZIP + 4 product

ZIP Code	Street Record Type	Primary Name	Primary Range Low High		Odd/Even Indicator	ZIP Add-On Sector Segment
12345	S	MAIN	0000000247	0000000253	O	12 01
12345	S	MAIN	0000000248	0000000254	E	12 02
12345	S	MAIN	0000000255	0000000257	O	12 03
12345	S	MAIN	0000000256	0000000258	E	12 04

The following example depicts a portion of Sector 12 in ZIP 12345.

**Figure 6.1** Sector 12 of ZIP Code 12345

As Figure 6.2 indicates, coves, cul-de-sacs, and terraces are not always segmented with the adjoining street, but they can be if the street name and/or suffix do not change.

**Figure 6.2** Cove, Cul-de-Sac and Terrace

Generally, city delivery streets that are undivided by intersecting streets are divided into 100-block segments (see Table 6.2).

**Table 6.2** Sample City Delivery Street Divisions

Record Type	Street Primary Name	Primary Range Low	Primary Range High	Odd/Even Indicator	ZIP Code	ZIP Add-On Sector Segment
S	MAIN ST	0000000001	0000000099	O	12345	65 23
S	MAIN ST	0000000002	0000000098	E	12345	65 28
S	MAIN ST	0000000100	0000000198	E	12345	65 29
S	MAIN ST	0000000101	0000000199	O	12345	65 24
S	MAIN ST	0000000200	0000000298	E	12345	65 30
S	MAIN ST	0000000201	0000000299	O	12345	65 25
S	MAIN ST	0000000300	0000000398	E	12345	65 31
S	MAIN ST	0000000301	0000000399	O	12345	65 26

However, there may be instances in which more than one 100 block exists within a segment (see Figure 6.3.)

**Figure 6.3** Multiple 100-Block Segment

## Leading Zero

There are some primary and secondary address numbers that have significant leading zeros. In these cases, the first significant leading zero of the address is represented in the ZIP + 4 file with a hyphen (-).

Examples:

An address of 0145 MAIN ST would fall within a record on the ZIP + 4 file with a primary address range of -101 to -199 MAIN ST.

An address of 00705 OAK DR would fall within a record on the ZIP + 4 file with a range of -0700 or -0799 OAK DR.

## Post Office Box Records

A “P” record type describes an individual post office box or a range of Post Office Boxes that share the same ZIP Add-on code. A “P” record may also describe a range of Post Office Boxes in which each box has its own ZIP Add-on (see Table 6.3). The first box number in the range of box numbers covered in the “P” record is coded in the Address Primary Low Number field, and the last box number in the range is coded in the Address Primary High Number field. The range of ZIP Add-on codes is found in the ZIP Add-on Range field. If practical, the Add-on sector and segment numbers are assigned to correspond to the Post Office Box numbers (e.g., the ZIP Add-on for Post Office Boxes 123 might be 0123). However, it is also possible that a range of post office boxes will be assigned a single Add-on sector/segment.

All Post Office Box records are indicated as such by the words “PO BOX” in the Street Name field in the ZIP + 4 product. The Post Office Box number(s) are coded in address primary range.

The ZIP Add-on codes for “P” records are assigned so that the first box number (in address primary low number) has an Add-on equal to the value of ZIP Add-on low number. The next number in the range (i.e., address primary low number plus one) has an Add-on equal to the value of ZIP Add-on low number plus one. This pattern continues through the value of address primary high number, which should have a ZIP Add-on equal to the Add-on high number).

Post office boxes can also be assigned to firms; however, the name of a firm associated with the Post Office Boxes does not appear in the ZIP + 4 product because Postal Service™ policy does not allow disclosure of both firm and individual names associated with Post Office Boxes. However, if a given firm or individual’s Post Office Box is known, it is possible to obtain the ZIP Add-on for that Post Office Box from the ZIP + 4 product.

**Table 6.3** Record Type “P” Example

REC	Carr. ID	Pre - Dir.	Street Name	Sufx.	Post Dir.	Primary Range		O E	Bldg Firm	Secondary Range		ZIP Add-on Range	
						Low	High			Low	High	Low	High
P	B001		PO BOX			A	A					0088	0088
P	B001		PO BOX			0000077001	0000077005					7001	7005
P	B002		PO BOX			0000078851	0000078999					8851	8999
P	B003		PO BOX			0000000501	0000000561					0501	0561

## Record Type “P” Example

ZIP	Rec	Street	City/ Place Name	Last Line	County Num.	County Name	Fac.
21401	P	MD	ANNAPOLIS	ANNAPOLIS	003	ANNE ARPS	P

Post Office Box records in the City State product may also identify non-carrier delivery Post Offices if no other record types are located within the finance number. Non-delivery offices will normally contain only Post Office Boxes, postmaster, and/or general delivery records on the ZIP + 4 product.

In the Carrier Route product, a “P” record type describes post office box information grouped by box section. The box section is equivalent to a carrier route for proper makeup of carrier route presorted mail.

## Rural or Contract Route Records

Rural routes with box deliveries are identified by record type “R.” Addresses such as ROUTE 3 BOX 15 are rural route box addresses. ZIP Add-on codes are generally assigned to rural routes based on the line of travel of the rural carrier. The carrier ID for rural or contract records is either “R####” or “H####”; “###” represents any three digits.

“R” record types with carrier IDs of “R####” have the primary name “RR ###,” and records with carrier-route indicators “H####” have the primary name “HC ###.” The range of box numbers covered by this record type is located in the Address Primary Range field (see Table 6.5 below).

Table 6.5 Record Type “R”

REC	Carr. ID	Pre- Dir.	Street Name	Sufx	Pos Dir	Primary Range		O E	Bldg Firm	Secondary Range		ZIP Add-on Range	
						Low	High			Low	High	Low	High
R	R002		RR 2			0000000001	0000000001					9701	9701
R	R002		RR 2			0000000002	0000000005					9702	9702
R	R002		RR 2			0000000006	0000000006					9703	9703
R	R002		RR 2			176A	176A					9743	9743
R	R002		RR 2			191B	191B					9758	9758
R	R002		RR 2						DEFAULT RECORD			9802	9802
R	H003		HC 3			0000000001	0000000029					9501	9501
R	H003		HC 3			78A	78C					9322	9322
R	H003		HC 3			78AA	79AA					9323	9323

## High-rise, Building, and Apartment Records

An “H” record type may be used to identify a commercial building, apartment complex, high-rise, wing or floor of a building, grouping of apartment mail boxes, or other physical location other than a street. A distinguishing feature of type “H” records is that the address primary low number equals the address primary high number, i.e., the record represents a single address rather than a range of addresses.

If there are multiple “H” records for a given address, then there may be multiple secondary ranges or names to express different suites, room numbers, etc., and a default record (see Table 6.6 on the next page). Default records will be shown with blank Address Secondary Abbreviation and Address Secondary High and Low fields. The address secondary abbreviation further describes the type of secondary address information in the secondary range (e.g., APT, STE).

**Table 6.6** Record Type “H”

REC	Carr. ID	Pre-ID	Street Name	Sufx	Post Dir	Primary Range		O E	Addr. Bldg. Firm	Scndy Abbr	Secondary Range		ZIP Add-on Range	
						Low	High				Low	High	Low	High
H	C009		BAILEY	ST		0000002863	0000002863	B	JONES	APT	0000000001	0000000008	6903	6903
H	C009	NE	WARE	CIR		0000000128	0000000128	B	AXIOM				4509	4509
H	C060	NE	WARE	CIR		0000000128	0000000128	B	AXIOM	RM	0000000100	0000000199	4510	4510
H	C060	NE	WARE	CIR		0000000128	0000000128	B	AXIOM	RM	0000000200	0000000299	4514	4514
H	C022		CHIME	ST	W	0000000740	0000000740	B	CAMPUS	STE			8331	8329
H	C022		CHIME	ST	W	0000000740	0000000740	B	CAMPUS	STE	0000000001	0000000010	8328	8328
H	C022		CHIME	ST	W	0000000740	0000000740	B	CAMPUS	STE	0000000011	0000000018	8329	8329
H	C022		CHIME	ST	W	0000000740	0000000740	B	CAMPUS	STE	0000000019	0000000028	8330	8330

## Firm Records

A firm record (type “F”) in the ZIP + 4 product represents a commercial or organizational entity receiving a locally-determined minimum number of pieces of machinable letter-sized mail per day. In addition to record type “H,” record type “F” could be used to identify a commercial building, apartment complex, high-rise, wing or floor of a building, grouping of apartment mail boxes, or other physical location other than a street, depending upon the internal mail distribution practices at the address.

Type “F” records may have a range of ZIP Add-on code assignments. A firm can request multiple ZIP Add-on codes to segregate mail going to different departments within the company. The range of Add-on codes would appear in the ZIP Add-on Range field (see Table 6.7).

For multiple Add-ons assigned to a firm in a single address range, mailers should select the lowest Add-on code. If multiple records for the same firm exist, mailers should select the singular Add-on sector segment number (ZIP Add-on), if applicable.

**Table 6.7** Record Type “F”

REC	Carr ID	Pre ID	Street Name	Sufx	Post Dir	Primary Range		O E	Addr. Bldg. Firm		Scndy. Abbr.	Secondary Range		ZIP Add-on Range	
						Low	High					Low	High	Low	High
F	C022		CHIME	ST	W	0000000740	0000000740	B	BIKES		APT	0000000001	0000000008	6903	6903
F	C010		DISK	DR		0000001975	000001975	B	AXIOM					4509	4509
F	C015		DISK	DR		0000004504	0000004504	B	AXIOM		RM	0000000100	0000000199	4510	4510
F	C015		DISK	DR		0000004504	0000004504	B	AXIOM		RM	0000000200	0000000299	4514	4514
F	C000		BAY	ST		0000001900	0000001900	B	CAMPUS		STE			8331	8329
F	C016		PRIME			0000001815	0000001815	B	CAMPUS		STE	0000000001	0000000010	8328	8328
F	C022		CHIME	ST	W	0000000740	0000000740	B	CAMPUS		STE	0000000011	0000000018	8329	8329
F	C022		CHIME	ST	W	0000000740	0000000740	B	CAMPUS		STE	0000000019	0000000028	8330	8330

## General Delivery Records

A general delivery record (record type “G”) consists of the words “GENERAL DELIVERY” in the Street Name field (see Table 6.8). General delivery records contain the ZIP + 4 code for general delivery mail in a particular ZIP Code.

**Table 6.8** Record Type “G”

REC	Carr. ID	Pre- ID	Street Name	Sufx.	Post Dir.	Primary Range		O E	Addr. Bldg. Firm	Scndy. Abbr.	Secondary Range		ZIP Add-On Range	
						Low	High				Low	High	Low	High
G	G001		GENERAL DELIVERY										9999	9999

## Multi-Carrier Records

Record type “M” describes a single address serviced by more than one carrier. These records are coded in groups of two or more. In Table 6.9, the street address is 102 EAST MAIN ST, and at that address, apartment numbers 100 through 699 and 700 through 1599 are served by carriers C007 and C008.

**Table 6.9** Record Type “M”

UPDATE Key No.	Rec	Carr. ID	Pre- Dir	Street Name Sufx.	Post Dir	Primary Range	O E	Bldg/ Firm	Secondary Range
V1000000011	M	C007	E	MAIN	ST	102	102	B PLACERVILLE	0100 0699
V1000000012	M	C008	E	MAIN	ST	102	102	B PLACERVILLE	0700 1599

## Chapter 6: Using Key Fields

The products listed below contain the following key fields.

**Carrier Route**

Preferred Last Line City State Key

Urbanization City State Key

**Delivery Statistics**

Municipality City State Key\*

Preferred Last Line City State Key

**Five-Digit ZIP**

Preferred Last Line City State Key

Urbanization City State Key

**ZIP + 4**

Municipality City State Key\*

Preferred Last Line City State Key

Urbanization City State Key

*\* This field will be left blank until further notice.*

These keys provide users the ability to access additional information on any record information such as the Postal Service™ preferred last line (city/state name) for a particular address range. For example, if you wish to obtain the preferred last-line name for a particular ZIP + 4 record, complete the following steps:

1. Obtain the Preferred Last Line City State Key value from the ZIP + 4 record.
2. Match the Preferred Last Line City State Key of the ZIP + 4 record to the City State Key in the City State product.
3. In the matching City State product record, the City State Name field will contain the preferred last-line name (follow CASS rules) as defined in the CASS Technical Guide.

The following steps should be completed to access an urbanization name for a ZIP + 4 record (urbanization names only exist for records in Puerto Rico; otherwise, this key field will be blank):

1. Obtain the Urbanization City State Key value from the ZIP + 4 record.
2. Match the Urbanization City State Key of the ZIP + 4 record to the City State Key in the City State product.
3. In the matching City State Product record, the City State Name field will contain the urbanization name. The same process is used to obtain the municipality name.

**Note:** *The city state name in the City State product can contain many types of names: preferred last-line, urbanization, municipality, and other names by which a given 5-digit ZIP Code is known.*

## Chapter 7: Ordering AIS Products

The United States Postal Service® National Customer Support Center (NCSC) in Memphis, Tennessee is the premier resource center for business mailers. NCSC offers a wide range of products and services that assist mailers in improving and maintaining address quality. Like Address Information System (AIS) products, the products and services listed below can lower production and postage costs by reducing undeliverable-as-addressed (UAA) mail, increasing opportunities to automate, and qualifying more mail pieces for postage discounts.

Address Quality products are designed to facilitate the matching of addresses to USPS® files to achieve optimal efficiency through improved address quality and accuracy. For additional information, or to order any of the products or services described in this manual, call the NCSC at (800) 238-3150.

### **Address Verification Products**

- AMS API (Address Matching System Application Program Interface) – a tool used in the development of address-matching software
- DPV – assists mailers in obtaining accurate delivery address information
- DSF<sup>2</sup> – helps mailers identify inaccurate or incomplete address
- LACS<sup>Link</sup> – an automated method of obtaining new addresses after a 911 emergency system had been implemented
- RDI – verifies whether a delivery type is classified as residential or business

### **Address Verification Services**

- Address List Sequence Service – manual address list sequencing
- AEC (Address Element Correction)/AECII – corrects and standardizes address elements
- CDS (Computerized Delivery Sequence) – provides and updates delivery sequence address information by carrier route
- EAS (Electronic Address Sequence Service) – processes and sequences address lists

For further information go to <https://postalpro.usps.com>.

## **Fulfillment Methods Available**

Address Information System products are available through Electronic Product Fulfillment (EPF).

To begin using Electronic Product Fulfillment (EPF), customers must complete and submit the Electronic Product Fulfillment Web Access Request Form. This form is located at <https://postalpro.usps.com/mnt/glusterfs/2017-06/ps5116.pdf>. It is used to set up an account on the EPF website. Once the account is set up, customers begin receiving emails identifying products that are posted to the website and ready for download.

## **Ordering Information**

To place an order for any AIS product, complete the order form located at <https://postalpro.usps.com/node/186>. A price list along with product IDs can be found at [https://postalpro.usps.com/address-quality/AIS\\_Products\\_Pricing](https://postalpro.usps.com/address-quality/AIS_Products_Pricing).

## **Product Subscription and Renewal**

All AIS products are offered on an annual subscription basis and are automatically issued on a monthly basis. Product subscriptions must be renewed every 12 months. Renewal notices are provided to customers 60 days via EPF prior to their subscription expiration date.

## **States and Territories**

For a complete list of US States and Territories, please refer to Publication 28, *Postal Addressing Standards* at <https://pe.usps.com/text/pub28/welcome.htm>.
